Evening Brief

Date: July 14th, 2021

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light-Moderate Initial Attack Activity
National	PL 4	New Fires and Acres: 38 fires for 383.64 acres / 903 acres Large Fire Growth

Weather Summary:

... Hot and Smoky Conditions Continue ...

... **Lightning Coverage continues through the Next Few Days ...**

... **Drier Lightning possible across Mountains of Eastern Idaho Thu-Fri...**

High pressure will remain in place the next few days with continued hot and smoky conditions across the region, mainly across Idaho, as well as Northern portions of Nevada and Utah. The smoke will help keep temperatures a few degrees lower than they otherwise would be in northern areas, but temperatures will still be well above normal.

Extensive lightning activity occurred over the past 2 days over the southern half of the Great Basin, some of it dry...but with monsoonal moisture quickly deepening, most storms by late Wednesday had some rain, with locally heavy amounts in the south. Scattered thunderstorms will continue mainly south of I-80 the next 2 days, more wet than dry. A bigger concern will be a cold front brushing by northern Idaho Thursday into Friday. This front could trigger scattered thunderstorms, which will only have light rainfall. High Risk may be issued for this area.

Otherwise, warmer/drier air is expected to push in from west to east across the Great Basin by this weekend with locally breezy conditions in the far north and west. Moisture returns by early next week over parts of southern and western areas of the Great Basin for the next chance of significant lightning.

Fuels/Fire Potential:

... **Fuels and Fire Behavior Advisory in effect for Utah, the Arizona Strip and Southern/Eastern/Central Nevada ...**

The continued hot and dry weather has caused fire danger values to rapidly increase to the 90th -97th percentile over much of the Geographic Area. However, fuels in the southern third of the Great Basin should moisten significantly by midweek with a deeper push of monsoonal moisture. Areas north of Highway 50 and west of I-15 should remain critically dry through the week, although higher humidity, and clouds/smoke could briefly take the edge off critical fuel dryness in many central areas as well.

Some of the driest areas are now up in Idaho, where ERC's are near record levels in many areas, and any lightning there will have a good potential for ignition and growth.

Resources:

Aviation within the Great Basin

- 0 VLAT, 0 LATs, 0 CL-415
- 26 SEATs, 2 FB, 8 AA, 0 ASM, 0 LP
- 10 Type 1 Helicopters / 4 Comm.
- 6 Type 2 Helicopters / 4 Comm.
- 18 Type 3 Helicopters / 9 Comm.

Crews Committed within the Great Basin

- 8 IHCs / 0 Available / 1 R&R
- 0 Type 2IA / 0 Available / 1 R&R

Current Incident Details

Today's Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. of Origin Sage Grouse Habitat
*Tamerlane	2021-NVHTF-040115	0.1	Controlled 07/13/21	39.1932	-115.752833	OHMA
